

Air Quality Services

ITPEnergised is a trusted advisor providing client-focused, reliable, commercially minded, environmental and energy consulting services.

Our first-class in-house air quality team has worked across many sectors with a diverse client base including, house builders and property developers, local authorities and government, industrial and manufacturing companies and energy developers and producers.

We can help you at all stages of your project from an initial constraints review to completion of complex air quality assessments for submission with planning and permitting applications. We also offer post-submission support including preparation of management plans and annual reporting and provide monitoring and environmental management during construction.

“I have used the services of key personnel at ITPE over a number of years and will continue to engage them as my preferred choice for environmental consultancy. I have the utmost confidence in their expertise and professionalism...”

Andrew McMurtle, CEO, Stoerhouse Highlands
