

Environmental, Social and Governance (ESG) and Responsible Investment

ITPenergised provide client-focused, reliable, commercially minded, environmental and energy consulting services.

With heightening awareness and understanding around climate change and sustainability issues, ESG strategies and responsible investing are increasingly becoming an essential component of a company's long-term success.

Increasingly corporates and investors are realising the benefits from integrating ESG into their businesses such as cost reduction, increased efficiency, effective risk management from regulatory obligations and climate impacts. It is also clear it provides market insight and competitive advantage, helps retain employees and wins new business and implements positive change in response to the current climate challenges.

"We would like to thank the ITPenergised team for their help in developing our ESG strategy using their informed position and understanding of the wider industry. They have a sound understanding of our business and it has been a pleasure to work with the team"

Ronald Lansdell, COO, Jersey Oil and Gas
