

Sustainable Development and Emerging Markets

ITPenergised is a trusted advisor providing client-focused, reliable, commercially-minded, environmental and energy consulting services.

We deliver a range of strategy, policy, technical and environmental support to the international development and donor community in renewable energy and climate change.

Our clients range from multilateral agencies such as the World Bank Group and the United Nations, through to governments, industrial multinationals, renewable energy project developers, private equity firms, technology companies and investors.

We often work directly with donor agencies and Governments to help design, manage and implement international development programmes as well as working with the beneficiaries of these programmes in the form of developers and communities to help deliver projects on the ground.

“Communication and collaboration efforts by ITPenergised were great, as was the approach used and interface with us as a client”

Gary Jackson, Executive Director, The Caribbean Centre for Renewable Energy and Energy Efficiency

We cover a range of sectors and developments:

- Renewable energy and climate change
- Off-grid energy and mini grids
