

ITPenergised takes its environmental and Greenhouse Gas (GHG) obligations seriously. As an advisor on decarbonisation to our clients, we recognise that we have the ability to make a difference.

We therefore encourage environmentally sound and energy aware practices both in the office and out of it. In line with our independently certified ISO 14001 environmental policy, we have set up several schemes across our UK offices in Edinburgh, Glasgow, Bristol, Aberdeen, and London to support the aims of quantifying, understanding, reducing and monitoring our GHG emissions through energy consumption, travel and project execution, including our supply chain.

ITPenergised is committed to operating in compliance with all relevant environmental legislation and industry best practice pertinent to our services framed by ISO 14064 – greenhouse gas accounting and verification. We have dedicated environmental specialist consultants in-house who ensure that the company is aware of its current and future legal obligations in this field.

This policy complements, and is integrated with, our existing management systems and addresses our GHG performance related to greenhouse gases, both at an organisational and project level, supported by GHG verification and validation.

To this end, we have established a QEMS Team to assist us in delivering the commitments made in this policy.

In managing our GHG impacts, we seek to:

- Operate and continually improve our integrated carbon management system, with a view to enhancing GHG and sustainability performance throughout our operations and the reduction of GHG for elements within our control or sphere of influence, as assessed with reference to our context and interested parties;
- Ensure the availability of information and of necessary resources to achieve objectives and targets;
- Conduct a review and develop a GHG baseline, against which we will monitor and measure our GHG impacts and develop improvement programmes where appropriate;
- Outline our objectives and targets and allocate resources to achieve these;
- Seek to purchase recycled, recyclable or refurbished products and materials where these alternatives are available, economically viable and suitable;
- Adapt to a more sustainable culture by providing staff with relevant education and information to encourage them to live and work in a carbon responsible manner;
- Promote the use of sustainable public transport to staff, contractors and visitors to our offices;
- Support the integration of GHG considerations and objectives into our business decisions and strategic direction of our business, where practicable;
- Communicate our commitment to clients, supply chain and the public and encouraging them to support it;
- Monitor our progress on our GHG impacts and performance;
- Review this policy annually to ensure it remains current and in line with planned future activities.
- Use effective communication, involvement and consultation activities on GHG matters both within the business and with relevant stakeholders;
- Ensure the competence of our employees through the provision of adequate information, and effective instruction, training and supervision;
- Co-operate with other organisations in respect of GHG management;

We are committed to providing adequate organisation, arrangements, and financial and physical resources to facilitate the successful delivery of this Policy. We will ensure that competent personnel are available to provide authoritative advice, training and support, to assist in promoting a strong and positive sustainable culture.
