

Risk Application

Intended User

Developers/ owners/operators/ funds/ new market entrants who desire a central hub to record risk probability and risk impact before and after mitigation along with potential financial and non financial impacts for global, regional and local portfolios and projects at any stage of the lifecycle.

The Problem

Risks can be stranded in excel databases, word templates and slide decks throughout an organisation reducing the ability to transparently monitor and action risks and identify common trends and insights across larger portfolios and projects at similar stages in the life cycle. This lack of a central view can result in unnecessarily enlarging safety risks to personnel and value at risk to the corporation.

Our Solution

Our central cloud hosted risk application enables an “all of enterprise view” of portfolio and project risks in a highly visual environment to help you prioritise the mitigation of all identified risks during development, construction, commissioning, testing, operations and decommissioning as well as fast paced M&A processes where our tool can help buyers describe the purchase price, any deferred payment and necessary conditions precedent.

Typical benefits

- ⇒ Accelerated risk identification, mitigation and quantification across the company
- ⇒ Transparency on all identified risks at the portfolio and project level
- ⇒ A centralised view that can be updated in real time and accessed across more of the enterprise
- ⇒ Highly visual environment helps improve organisational focus and pace on risk related matters
- ⇒ Compatible with other ITPEnergised NZA digital tools such as our financial modelling suite
- ⇒ Encrypted database, cybersecure, authentication measures
